

# Spectrum Data

from any media to any media and from any format to any format

Where there is data, there is a risk of data loss. Don't wait until it is too late - take control of your data backup process by outsourcing to specialists who will manage your backup solution on your behalf, in an effective, secure and professional manner.

SpectrumData offers a comprehensive range of managed backup solutions which will alleviate the workload from your personnel and allow them to concentrate on the more commercial and productive tasks at hand. Our scalable, high performance data management services are automated, secure and designed to meet your organisation's specific disaster recovery requirements. Each solution is customised to ensure the best match for your specific requirements.

managed backup services →

## how does the SpectrumData managed backup service work? →

- Audit of the existing client infrastructure.
- Through a consultation process, agree specifications and design a managed backup solution to meet requirements.
- Implementation of the managed backup solution which includes on site, off site and commissioning.
- Ongoing service management including backup media rotations, vault storage, data restoration requests, and periodic media and environment audits.
- Periodic on site visits where required such as large scale restores, consultation and other work.

## benefits of a managed backup service →

- Convenient and autonomous.
- Ensures ongoing protection of your vital data assets.
- Scalable irrespective of how quickly your business grows.
- Enables access to data through quick restoration and delivery methods.
- Reduces internal labour resources required to administer, maintain and manage your backup environment.
- Reduce risks associated with potential data loss.
- Use specialists in the data storage and backup field.
- Secure and confidential.

By choosing SpectrumData, an experienced managed backup solution provider with knowledge, reputation and expertise, your business continuity objectives are met and your valuable data assets are safeguarded.
